Q.25)Write a python program to find X^Y or pow(X,Y) without using standard function

```python
def Powers(X, Y):
Result = 1

for  in range(Y):
Result *= X
return Result

X = int(input("Enter the value of X: "))
Y = int(input("Enter the value of Y: "))

result = Powers(X, Y)

print(f"The value of {X}^{Y} is: {Result}")
```
